Technology days

When developing acting and surveying new oil and gas fields, oil and gas production companies are faced with a number of technology challenges.

In the conditions of sanctions which limit the possibility of use of foreign technologies, the companies are looking for new technology solutions..

Technology days is a type of events where participants can present their projects, tell about the technologies they'd developed, and receive feedback from representatives of oil and gas production companies.

Organizers of the event are creating a "technology funnel" in the most significant directions and accept projects of the participants for further consideration.

Key topics

PJSC LUKOIL, PJSC Surgutneftegas, PJSC Gazprom Neft, and PJSC Novatek defined the most significant directions:*

- CWell construction
- Drilling support
- Field development
- Geology, geophysics
- Methods of enhanced oil recovery
- Hydraulic fracturing
- Regular and capital repair of wells
- Underground pumping equipment
- Equipment and technologies for protection from mechanical impurities in the produced fluid
- Preparation, transportation, storage and processing of hydrocarbons
- Drilling and oilfield equipment
- Field development
- Industrial automation systems
- Industrial, environmental safety
- Protection of the environment
- Processing and recycling of industrial waste

* The complete list of technology challenges can be downloaded on the website oilgasforum.ru

Opportunities for participants

1

To meet representatives of head and affiliated offices of the largest oil and gas production companies at the same time and place.

The representation level of oil and gas companies at the Technology days: from managing companies – directors of directions; from affiliated companies - deputy director generals of directions: well-drilling, geology and development of fields, engineering, field set-up, transportation, processing etc.

2

To study the list of actual technology challenges, tasks and objectives for the largest oil and gas production companies of Russia.

4

To introduce an expanded technical report explaining the essence of the proposed solution, to show its economic feasibility at a closed event and to receive feedback from a potential customer.

3

To present their own technology solutions for consideration and examination by production and technical specialists of operational and scientific divisions of several affiliated companies in different public joint stock companies.

5

To include the developed technology in the program of trial testing of a large oil and gas company at successful test results.

Become a participant of Technology Days

1

Send an application on the website oilgasforum.ru *

The application should contain a brief description of the technology along with a presentation of your project. The presentation should have a research and development nature and should include a description of the performance characteristics and technological solutions, the results of pilot tests (if any), as well as the advantages to relatively similar proposals.

2

Expect a decision from the Organizers

All submitted projects are pre-selected by the research and development councils of the organizing companies. The decision on the participation of your project in Technology Days is taken directly by the representatives of the oil and gas company before 1 September, 2019.

3

Join TNF 2019 as a Speaker or a Participant of Technology Days

* Participant status of Technology Days can be acquired by selecting the formats Delegate or Premium.

* Submission of application before July 20, 2019

September 17-19, 2019

Welcome to TNF 2019

Use a unique opportunity to present your technologies to the largest players of the oil and gas market of Russia
